1.0 INTRODUCTION

This section of the Joint Application has not changed; therefore, refer to the information provided within the November 2013 supplemental submission for Project details contained within the narrative.

1.1 PRE-EMPTION STATEMENT

2.0 GENERAL PROJECT DESCRIPTION

Supplemental material within Section 2.0 is limited to new information contained within the associated tables. Please refer to the information provided within the November 2013 supplemental submission for Project details contained within the narrative.

2.1 PROPOSED FACILITIES

2.1.1 Purpose and Need as Defined for the FERC NEPA Process

2.1.2 Location and Description of Facilities and Land Requirements

Table 2.1-1 Summary of Project Facilities in New York

Facility ID	Facility Type ^a	Length (miles) ^b	County	State
Pipeline Facilities				
Constitution Pipeline	30-inch Pipeline	17.04	Broome	NY
		8.31	Chenango	NY
		42.92	Delaware	NY
		30.92	Schoharie	NY
Pipeline Facilities Total		99.20	-	-
Facility ID	Facility Type ^a	Horsepower	County	State
Aboveground Facilities				
Westfall Road M&R Delivery Station	Meter & Regulator Station	N/A	Schoharie	NY
Aboveground Facilities Total		N/A	-	-

This table has been entirely updated since the November 2013 submittal

a: All facilities are new and require new land development.

b: Horizontal Distance.

Table 2.1-2 Summary of Land Requirements in New York

Facility ^a	Land Affected During Construction ^b (acres)	Land Affected During Operation ^c (acres)
<i>Pipeline Facilities:</i>		
Pipeline	1,243.14	562.66
Additional Temporary Workspace	96.85	0.00
Pipeline Subtotal	1,339.99	562.66
<i>Aboveground Facilities:</i>		
Westfall Road M&R Delivery Station (includes MLV Terminus, interconnecting piping and Pig Receiver)	3.33	2.29
Access Roads	34.32	27.12
Contractor Yards	79.68	0.00
Cathodic Protection Ground Beds	TBD	TBD
New York Total	1,457.32	592.07

This table has been entirely updated since the November 2013 submittal

a: MLVs are located within the operation ROW of the pipeline and do not contribute additional acres affected.

b: Land Affected During Construction for the Pipeline facilities is comprised of above ground facilities, the 50-foot permanent ROW, the 60 feet of TWS in upland areas; 25 feet of TWS in wetland and waterbody areas; and 75 feet of TWS in agricultural areas, and ATWS where required. Acreages are approximate.

c: Land Affected During Operation includes the new 50-foot permanent ROW and Westfall Road M&R station.

d: Cathodic Protection Ground Bed land requirements have not yet been determined.

TBD = To be determined.

2.1.2.1 Pipeline Facilities

Table 2.1-3 Proposed Pipeline Facilities

Milepost ^a		Length ^b (miles)	Township/ Town	County	State
Begin	End				
25.26	42.30	17.04	Sanford	Broome	NY
42.30	47.62	5.32	Afton	Chenango	NY
47.62	50.62	3.00	Bainbridge	Chenango	NY
50.62	50.63	0.01	Bainbridge	Delaware	NY
50.63	52.34	1.71	Masonville	Delaware	NY
52.34	64.23	11.90	Sidney	Delaware	NY
64.23	73.66	9.42	Franklin	Delaware	NY
73.66	89.03	15.37	Davenport	Delaware	NY

Table 2.1-3 Proposed Pipeline Facilities

Milepost ^a		Length ^b (miles)	Township/ Town	County	State
Begin	End				
89.03	93.54	4.52	Harpersfield	Delaware	NY
93.54	93.88	0.34	Summit	Schoharie	NY
93.88	94.12	0.24	Jefferson	Schoharie	NY
94.12	96.00	1.88	Summit	Schoharie	NY
96.00	96.54	0.53	Jefferson	Schoharie	NY
96.54	97.01	0.47	Summit	Schoharie	NY
97.01	98.95	1.94	Jefferson	Schoharie	NY
98.95	105.05	6.11	Summit	Schoharie	NY
105.05	109.95	4.90	Richmondville	Schoharie	NY
109.95	112.09	2.13	Cobleskill	Schoharie	NY
112.09	115.61	3.53	Middleburgh	Schoharie	NY
115.61	123.98	8.36	Schoharie	Schoharie	NY
123.98	124.46	0.48	Wright	Schoharie	NY
New York Subtotal		99.20	-	-	-

This table has been entirely updated since the November 2013 submittal

a: Since the interstate pipeline originates in Pennsylvania and crosses the New York border the interstate milepost numbering system will be used as part of this application.

b: Horizontal distance

2.1.2.2 Aboveground Facilities

Table 2.1-4 Land Requirements for Aboveground Facilities

Facility Id ^a	Approximate Milepost	Township	County/ State	Co-located Facility (Yes/No)	Land Affected During Construction (acres) ^b	Land Affected During Operation (acres) ^b
New York						
Westfall Road M&R Delivery Station (includes MLV Terminus, interconnecting piping & Pig Receiver)	124.46	Wright	Schoharie/ NY	No	3.33	2.29

This table has been entirely updated since the November 2013 submittal

a: Facilities are new and require new land development. Includes one MLV, interconnecting piping & Pig Receiver).

b: Acreages are approximate.

Table 2.1-5 Proposed Aboveground Facilities

Facility ID ^a	Horsepower	Milepost	Township	County	State
New York					
MLV #3 Vale Rd.	N/A	26.80	Sanford	Broome	NY
MLV #4 O'Brien Rd.	N/A	40.94	Sanford	Broome	NY
MLV #5 Access Rd/Town Rd.	N/A	52.23	Masonville	Delaware	NY
MLV #6 Stewart Rd.	N/A	65.94	Franklin	Delaware	NY
MLV #7 County Road 10	N/A	80.39	Davenport	Delaware	NY
MLV #8 Clapper Hollow Rd.	N/A	95.05	Summit	Schoharie	NY
MLV #9 Access Rd./ Dodge Lodge Rd.	N/A	107.26	Richmondville	Schoharie	NY
MLV #10 Smith Rd.	N/A	119.51	Schoharie	Schoharie	NY
Westfall Road M&R Delivery Station (includes Pig Receiver & MLV Terminus)	N/A	124.46	Wright	Schoharie	NY

This table has been entirely updated since the November 2013 submittal.

a: Proposed aboveground facilities are new. Land impacts for the aboveground facilities, except the meter stations and internal inspection facilities, are included in workspace totals for the pipeline facilities.

2.1.2.3 Access Roads

2.1.2.4 Contractor Yards

Table 2.1-6 Access Roads Associated with the Constitution Pipeline^e

Access Road ID	Milepost ^a	County	Existing Road Type	Modification Required/New	Existing Land Use ^b	Length (feet)	Affected Area (Construction) (acres) ^c	Affected Area (Operation) (acres)	Justification
BROOME COUNTY									
PAR-20	26.81	Broome	none	grading/gravel/tree removal	RD, UF	87	0.01	0.01	Access is necessary to the main line valve site for construction and operation of the Project.
PAR-21	27.84	Broome	dirt	Needs nothing-great road	OL, RD, RE, UF, WB	2,018	0.83	0.83	Access is necessary between Laurel Lake Rd and RR due to the terrain and waterbody crossing near this location.
PAR-22	28.55	Broome	gravel	barrier fence/railroad ballast/existing Bluestone access road/grading	ID, RD, UF	4,717	1.33	1.33	Access is necessary between Laurel Lake Rd and RR due to the location of Highway 17 for construction and operation of the Project.
TAR-22A	28.85	Broome	gravel	silt fence sediment barrier	OL, RD, UF, WB	587	0.32	0.00	
TAR-27	33.86	Broome	dirt	grading/graveling	AG, RD	496	0.22	0.00	Temporary access road will be needed for travel locations along Hwy 40 and to assist with a waterbody crossing.
PAR-28	35.22	Broome	gravel/dirt	grading	OL, RD, RE	558	0.18	0.18	Access is necessary between Shaver Hill Rd and CR-241 due to the number of wetland locations in this area.
PAR-29	36.22	Broome	dirt	graveling-existing road	AG, RD, UF	609	0.28	0.28	Access is necessary between CR-241 and Clark Rd due to the number of wetland locations in this area and the Clark Road bore site.
PAR-31	40.74	Broome	gravel	grading/culvert/brush removal/graveling	AG, OL, RD, RE, UF	181	0.05	0.05	Access is necessary between Obrien Rd to conduct the two road bores.
Broome County Subtotal						9,253	3.20	2.66	
CHENANGO COUNTY									
PAR-33	43.71	Chenango	gravel	grading	OL, RD	570	0.25	0.25	Access is necessary between Oxbow Rd and Edwards Ln for construction and operation of the Project.
PAR-34	44.3	Chenango	dirt	tree removal/culvert/grading/graveling	RE, UF	1,722	0.78	0.78	Access is necessary between Edwards Ln and Melondy Hill Rd for construction and operation of the Project.
Chenango County Subtotal						2,292	1.03	1.03	
DELAWARE COUNTY									
PAR-36	52.24	Delaware	dirt	brush removal and grading at end of road/graveling	OL, PEM, RD, RE, SG, UF	1,966	0.93	0.93	Access is necessary to reach the mainline valve site for construction and operation of the Project.
TAR-36A	54.16	Delaware	dirt	grading/graveling	AG, OL, PEM, RD, RE, UF, WB	3,164	2.02	0.00	Access is necessary between Pine Hill Rd and Parker Hollow Rd to reach the HDD location while avoiding impacts to a cultural site.
TAR-36B	54.4	Delaware	dirt	grading/graveling	OL, PEM, RD, UF	2,976	1.66	0.00	

Table 2.1-6 Access Roads Associated with the Constitution Pipeline^e

Access Road ID	Milepost ^a	County	Existing Road Type	Modification Required/New	Existing Land Use ^b	Length (feet)	Affected Area (Construction) (acres) ^c	Affected Area (Operation) (acres)	Justification
TAR-36C	54.92	Delaware	gravel	none	OL, PEM, UF	3,626	1.92	0.00	Access is needed for workspace to the HDD locations.
PAR-36D	55.45	Delaware	gravel	culvert/silt fence sediment barrier	OL, UF	312	0.13	0.13	
PAR-37	58.93	Delaware	dirt	tree removal/grading/widening/graveling	AG, OL, RD, UF, WB	4,086	1.80	1.80	Access is necessary between Crane Hill Rd and CR-357 due significant terrain and the number of wetlands in the general vicinity of this location.
PAR-38	60.17	Delaware	dirt	brush and tree removal/grading/widening/graveling	AG, OL, PEM, RD	1,478	0.61	0.61	
PAR-39	62.61	Delaware	dirt	tree removal/grading/widening/graveling	OL, RD, RE, UF	2,079	1.16	1.16	
PAR-40	63.9	Delaware	dirt	grading/brush removal/graveling	AG, OL, PFO, RE, UF, WB	2,384	1.21	1.21	Access is necessary between Patent Line Rd and Bissell Rd for construction and operation of the Project.
PAR-41	65.92	Delaware	dirt	tree removal/grading/culvert/graveling	AG, RD, UF	719	0.28	0.28	Access is necessary between Bissell Rd and Otego Rd for construction and operation of the Project.
PAR-43	68.19	Delaware	dirt	grading/graveling/culvert	OL, UF	3,114	1.96	1.96	Access is necessary between Stewart Rd and Chamberlain Hill Rd for construction and operation of the Project.
PAR-44	69.96	Delaware	gravel	some widening/grading/tree clearing-part existing rd	AG, OL, PEM, RD, UF, WB	3,288	1.22	1.22	Access is necessary between Chamberlain Hill Rd and Rich Rd for construction and operation of the Project.
PAR-46 ^d	72.79	Delaware	none	grading/tree removal for widening/culvert/graveling	OL, PSS, RD, UF, WB	5,454	3.09	3.09	Access is necessary between CR-28 and Grange Hall Rd for construction and operation of the Project.
PAR-47	73.63	Delaware	dirt	culvert/tree removal/grading/graveling	OL, UF	2,034	1.21	1.21	Access is necessary between Grange Hall Rd and Swart Hollow Rd to avoid significant areas of terrain and cropland during post construction maintenance activities.
PAR-48B	76.88	Delaware	none	tree and brush removal/grading/culvert/graveling	PFO, PSS, RD, RE, UF	1,000	0.78	0.78	Access is necessary between Coe Hill Rd and Monkey Run Rd due to the terrain present in this area.
PAR-48A	80.39	Delaware	gravel	minor road improvements	OL, RD	128	0.03	0.03	Access is need to the mainline valve site for construction and operation of the Project.
TAR-5	87.64	Delaware	none	tree removal/grading/culvert/graveling	AG, RE, UF	1,421	0.74	0.00	Access is necessary between Old 96 and CR-23 to avoid impacts to the waterbody and wetlands present at this location, as well as for access associated with the HDD.
PAR-56	89.3	Delaware	dirt	grading/graveling	AG, RD, UF	1,345	0.87	0.87	Access is necessary between Parker Schoolhouse Rd and Quaker Hill Rd to avoid impacts to croplands during operation of the Project.

Table 2.1-6 Access Roads Associated with the Constitution Pipeline^e

Access Road ID	Milepost ^a	County	Existing Road Type	Modification Required/New	Existing Land Use ^b	Length (feet)	Affected Area (Construction) (acres) ^c	Affected Area (Operation) (acres)	Justification
TAR-4	92.77	Delaware	none	tree removal/grading/culvert/graveling	OL, RD	414	0.25	0.00	Access is necessary between Titus Lake Rd and Wood Chuck Run for construction and operation of the Project.
Delaware County Subtotal						40,987	21.88	15.29	
SCHOHARIE COUNTY									
PAR-56A	94.18	Schoharie	gravel	sediment barrier, erosion control	AG, RD, UF	1,686	1.05	1.05	
PAR-59	95.05	Schoharie	gravel	grading/culvert/tree removal	AG, RD	254	0.14	0.14	Access is necessary to the mainline valve location for construction and operation of the Project.
PAR-60	95.99	Schoharie	none	tree and brush removal/grading/culvert/graveling	RD, UF	2,264	1.68	1.68	Access is necessary between Clapper Hollow Rd and Standard Rd for travel through rough and wet terrain during construction and operation of the Project.
PAR-63	99.91	Schoharie	dirt	tree and brush removal/grading/graveling	RD, UF	565	0.46	0.46	Access is necessary between Arabia Rd and CR-10 for construction and to avoid impacts to croplands during operation of the Project.
TAR-2	101.49	Schoharie	none	tree and brush removal/grading/culvert/graveling	AG	180	0.07	0.00	Access is necessary for travel to the bore location.
PAR-66	103.45	Schoharie	dirt	tree and brush removal/grading/culvert/graveling	RD, UF, WB	3,086	1.51	1.51	Access is necessary between Sawyer Hollow Rd and Decker Rd for construction and operation of the Project.
PAR-68	106.45	Schoharie	none	grading/culvert/tree and brush removal/graveling	UF	416	0.17	0.17	Access is necessary between Lape Rd and Cross Hill Rd-needed to access rugged terrain for construction and maintenance
PAR-73	117.88	Schoharie	gravel	grading/tree removal/graveling	AG, OL, RD, UF	2,107	1.34	1.34	Access is necessary between Terrace Mnt Rd and Smith Rd. to avoid travel in areas of rough terrain and minimize impacts to an agricultural field.
PAR-74	119.61	Schoharie	gravel	tree removal/culvert/grading/graveling	AG, RD	153	0.01	0.01	Access is necessary to the mainline valve location and the workspace for the proposed Direct Pipe.
PAR-74C	119.89	Schoharie	paved	No improvements proposed	OL, PSS, RD	1,813	1.07	1.07	Access is necessary for the Direct Pipe crossing proposed for this location.
PAR-74D	120.13	Schoharie	gravel	proposed temporary lane for two way traffic	OL, PEM	833	0.46	0.46	
PAR-76	124.46	Schoharie	gravel/grass	grading/gravel	AG, ID	342	0.25	0.25	Permanent access road is needed for travel to the meter station.
Schoharie County Subtotal						13,699	8.22	8.14	

Table 2.1-6 Access Roads Associated with the Constitution Pipeline^e

Access Road ID	Milepost ^a	County	Existing Road Type	Modification Required/New	Existing Land Use ^b	Length (feet)	Affected Area (Construction) (acres) ^c	Affected Area (Operation) (acres)	Justification
OTSEGO COUNTY									
None	-	-	-	-	-	-	-	-	
Otsego County Subtotal						0	0.00	0.00	
NEW YORK SUBTOTAL						66,232	34.32	27.12	

This table has been entirely replaced since the November 2013 submittal.

a: Milepost indicates the point at which the access road connects with the pipeline ROW.

b: Agricultural (AG); Industrial (ID); Residential (RE); Roads (RD); Open Land (existing ROW, Open Field, Non-Agriculture) (OL); Wetlands (palustrine forested, scrub-shrub, and emergent (WL); Upland Forest (UF); Sand and Gravel (SG); Palustrine Forested Wetland (PFO); Palustrine scrub-shrub wetland (PSS); Palustrine emergent wetland (PEM); Waterbody (WB).

c: Temporary access roads will be restored to pre-construction land use and will not result in permanent land impacts or land use modification.

d: PAR46 is still being designed. Therefore a width of 40' has been used for construction impact calculations and a width of 24' has been used for operations impact calculations.

e: Access road lengths and impacts have been calculated based on the site specific designs.

TAR - Temporary Access Road

PAR - Permanent Access Road

Table 2.1-7 Proposed Pipe and Contractor Yards

Name/ Purpose	Approximate Location	Address	Construction Year	Existing Land Use Classification	Size ^a (Acres)	Comments
New York						
Contractor Yard 3A/ Construction Spread 3	309' south of MP 61.10	Sidney-Wells Bridge Road, Unadilla, NY	2015	Agriculture	10.99	Site improvements to facilitate use of this contractor yard will consist of topsoil segregation/temporary stabilization, minimal site grading, and the installation of construction entrance and gravel base (as described in the ECPs).
Contractor Yard 4A/ Construction Spread 4	16,176' north of MP 77.36	361 CO HW 58, Milford, NY	2015	Sand and Gravel, Open Land, PEM & Road	26.65	Site improvements to facilitate use of this contractor yard will consist of topsoil segregation/temporary stabilization, minimal site grading, and the installation of construction entrance and gravel base (as described in the ECPs).
Contractor Yard 4D/ Construction Spread 4	6,230' north- west of MP 82.20	12871 State Route 23 Davenport, NY 13750	2015	Agriculture, PEM	23.86	Site improvements to facilitate use of this contractor yard will consist of topsoil segregation/temporary stabilization, minimal site grading, and the installation of construction entrance and gravel base (as described in the ECPs).
Contractor Yard 5/ Construction Spread 5	7,610' north- west MP 107.15	1238 State Route 7 Richmondville, NY	2015	Agriculture, PEM Commercial /Industrial & Open Land	18.18	Site improvements to facilitate use of this contractor yard will consist of topsoil segregation/temporary stabilization, minimal site grading, and the installation of construction entrance and gravel base (as described in the ECPs).
New York Subtotal					79.68	-

This table has been entirely updated since the November 2013 submittal.

a: Acreage impact refers to construction acreage (TWS, ATWS and operational).

Land in Agriculture	48	24
Drainage ditches of public roads or railroad crossings	60	24
Navigable river, stream, or harbor	60	24
Minor stream crossings	60	24

a: As defined by USDOT Pipeline and Hazardous Materials Safety Administration (PHMSA) at 49 CFR 192.5.

Class 1: offshore areas and areas within 220 yards of a pipeline with ≤10 buildings intended for human occupancy.

Class 2: areas within 220 yards of a pipeline with >10 but <46 buildings intended for human occupancy.

Class 3: areas within 220 yards of a pipeline with >46 buildings intended for human occupancy and areas within 100 yards of either a building or a small, well defined outside area (such as a playground, recreation area, outdoor theater, or other place of public assembly) that is occupied by 20 or more persons on at least five days a week for 10 weeks in any 12-month period.

Class 4: areas within 220 yards of a pipeline where buildings with four or more stories are prevalent.

Access Road Total Crossing Length										160	0.08						
Total Crossing Length New York										2,954	4.59						

This table has been updated since the November 2013 submittal

N/A = Not Applicable

TBD = To Be Determined

a: UNT: Unnamed Tributary. UNT name was identified based on review of USGS topographical mapping.

b: MP provided for access roads indicate the point at which the access road meets the proposed pipeline.

c: P = perennial; I = intermittent; POW = open water; E = Ephemeral.

d: 0.0 = waterbody is not crossed but is in workspace. For minor waterbodies less than 3 feet in width delineated in the survey area and shown as a single line feature on the Project alignment sheets, an assumed 3 foot width has been used for this analysis.

e: MI = Minor (<10 feet); I = Intermediate (>10 - <100 feet); MA = Major (>100 feet).

f: NY Water Quality Standards Definition: Water quality standards based on the classification and best use of waterbody as determined by NYSDEC (6 NYCRR Parts 815, 879, 931).

g: N/A = Not applicable, no state fishery classification; NY Fishery Classifications: T = Trout; TS = Trout Spawning (6 NYCRR 701.25).

h: Construction Windows for cold water fisheries are based on correspondence from S. Tomasik of NYSDEC to Constitution dated March 21, 2014. Section 3.0 includes Stream and Wetland Protection Procedures. Potential timing restrictions reflect dates during which construction activities may occur. Streams with no construction timing restrictions, shown as "N/A" on the Table, do not have timing restrictions for construction based on NYSDEC regulations and consultations. Waterbody-specific assignment of construction window based on in-field consultation with the NYSDEC (see Attachment J - Waterbody and Wetland Impacts Master Table for further detail).

i: I = Wet Open Cut Method; II = Dry Crossing Method, including Flume or Dam and Pump, Cofferdam, or Dry Open Cut for waterbodies that are dry at the time of crossing; Method III = Conventional Bore; IV = HDD, V = Direct Pipe Method. Intermittent waterbodies containing discernible flow at the time of construction will be crossed using a dry crossing method, unless otherwise authorized by applicable regulatory agencies.

Table 3.2-2 Summary of Waterbody Crossings for the Constitution Pipeline - Pipeline Facilities by FERC Classification^{ab}

State	Minor <10 feet	Intermediate >10 - ≤100 feet	Major >100 feet	Total
New York	135	84	1	220

This table has been entirely replaced since the November 2013 submittal.

a: Waterbodies in the workspace but not crossed by the pipeline are not counted in this table as crossings.

b: Waterbodies impacted by access roads are not counted in this table as crossings.

c: For this table, the Bennettsville Creek crossings CH-1A-S010, CH-1A-S010B, CH-1A-S010C, and CH-1A-S010F were counted together as one major crossing.

3.2.2 NYSDEC Protection of Waters

Table 3.2-3 Additional Temporary Workspace Within Wetlands for the Constitution Pipeline^a

ATWS ID #	Township/ Town	County	Start Milepost	End Milepost	Nominal Dimensions ^b (feet)		Area Affected ^c (square feet)	Area Affected ^c (acres)	Existing Land Use ^d	Feature ID	Justification ^e	Additional Justification
					Width	Length						
ATWS 256C	Bainbridge	Chenango	50.18	50.21	50	150	8,080	0.19	OL, PEM	CH-1A-S047, CH-1A-W047	d, i	ATWS at this location is necessary for spoil storage to allow for the reduced construction workspace associated with the waterbody and wetland crossing, as well as storage of spoil generated from the road bore crossing.
ATWS 261A	Masonville	Delaware	51.65	51.68	50	135	6,740	0.15	PFO, UF	DE-1B-W032	d	ATWS is necessary for spoil storage to facilitate the road bore crossing.
ATWS 275	Sidney	Delaware	55.28	55.33	90	250	22,512	0.52	OL, PEM, PFO, UF	DE-1F-W075	n	ATWS is necessary for the HDD entrance pit for the trenchless crossing proposed at this location.
ATWS 393	Davenport	Delaware	81.63	81.75	50	646	46,627	1.07	OL, PEM, UF	DE-1C-W351	n	ATWS will be utilized for spoil storage to allow for the reduced workspace associated with multiple wetland and waterbody crossings and storage of concrete coated pipe needed for construction at this location.
ATWS 427C	Harpersfield	Delaware	90.27	90.28	50	50	2,500	0.06	OL, PEM	DE-1P-W128	i	ATWS will be necessary for equipment and spoil storage to facilitate construction of the road crossing, wetland crossing and crossing of the existing pipeline.
ATWS 427D	Harpersfield	Delaware	90.30	90.32	50	100	5,000	0.11	PEM	DE-1P-W128	i	
ATWS 466C	Summit	Schoharie	101.72	101.75	50	150	7,829	0.18	PFO, UF	SC-1E-W100	d, h, i	ATWS will be utilized for equipment and spoil storage to facilitate the road crossing as well as crossing of the adjacent wetland and waterbody.
ATWS 551	Schoharie	Schoharie	119.58	119.68	26	607	51,100	1.17	AG, OL, PEM	SC-1I-W399	d, r	ATWS is necessary for storage of spoils, equipment and access associated with the Direct Pipe trenchless crossing proposed at this location.

This table has been entirely replaced since the November 2013 submittal.

a: Areas of temporary workspace that are greater than 75 feet within a wetland but do not include ATWS are not included in this table

b: Several ATWS areas are irregularly shaped - dimensions of such areas are approximate.

c: Area shown is the actual area of the ATWS shape, calculated using GIS software. Nominal length x width will only match this area if the ATWS is a perfect rectangle. If the shape is not a perfect rectangle, the nominal length x width will only give approximate area of the shape

d: AG = Agricultural; ID = Industrial; RE = Residential; RD = Roads; OL = Open Land (existing ROW, Open Field, Non-agriculture); PFO = Palustrine Forested Wetlands; PSS = Palustrine Scrub-Shrub Wetlands; PEM = Palustrine Emergent Wetlands; WB = Waterbody; UF = Upland Forest.

e: a=road crossing; b=side slope construction; c=steep slope construction; d=road bore; e=powerline crossing; f=railroad crossing; g=rock outcrop; h=waterbody crossing; i=wetland crossing; j=horizontal bends > 10%; k=swap working side/ crossover; l=utility crossover; m=top soil segregation, n=HDD Crossing, o=hydrotest station, p=spread break, q=dewatering site, r=direct pipe drill crossing.

3.2.2.1 Water Quality Classifications and Standards

3.2.3 Sensitive Surface Waters

3.2.3.1 Cold Water Fisheries

Table 3.2-4 Summary of Waterbodies Containing Cold Water Fisheries Crossed by the Project in New York

County	State Water Quality Standard ^a	Number of Waterbody Crossings ^b	Proposed Crossing Method ^c
Broome	B(T)	6	II
	C(T)	12	II
	C(TS)	4	II
Chenango ^d	C(T)	1	II
	C(T)	1	V
	C(TS)	2	II
Delaware	C(T)	3	II
	C(TS)	29	II
	C(TS)	1	V
Schoharie	C(T)	7	II
	C(TS)	9	II
Total		75	-

This table has been entirely updated since the November 2013 submittal.

a: NY Water Quality Standards Definition: Water quality standards based on the classification and best use of waterbody as determined by NYSDEC (6 NYCRR Parts 815, 879, 931); T = Trout; TS = Trout Spawning (6 NYCRR 701.25).

b: Waterbodies impacted by access roads are not counted in this table as crossings.

c: II = Dry Crossing Method, including Flume and Dam and Pump (Intermittent streams containing discernible flow at the time of construction will be crossed using a dry crossing method); III = Conventional Bore; IV = HDD ; V = Direct Pipe.

d: For this table, the Bennettsville Creek crossings CH-1A-S010, CH-1A-S010B, CH-1A-S010C, and CH-1A-S010F were counted together as one DP crossing.

3.2.3.2 Impaired Waters

3.2.3.3 Public Drinking Water Watersheds

Residents in the Project area in New York mainly depend on private wells as a primary source of drinking water. The proposed alignment crosses an unnamed tributary to the Susquehanna River in Sidney, Delaware County, New York. This tributary (DE-1H-S013) is a Class AA waterbody under the New York State Water Quality Classifications. The tributary (known locally as Collar Brook) flows into The

Pine Hill Reservoirs, owned by the Village of Sidney. According to the *Village of Sidney Annual Drinking Water Report for 2011*, this reservoir supply system is not currently in use for drinking water, but is available for backup, if needed (Village of Sidney 2011). This class AA water is currently being evaluated for a trenchless crossing method for the Project.

The Cobleskill Reservoir system is located within the Village of Cobleskill, Schoharie County, and includes three reservoirs, Dow Reservoir, Smith Reservoir, and the Holding Pond. The proposed alignment crosses the system watershed for 0.81 miles. Two wells located in the Village of Cobleskill also serve as a backup source for the system. This reservoir system serves the Village of Cobleskill and the State University of New York at Cobleskill, which included a combined service population of 6,933 in 2011. The reservoir watershed area is approximately four square miles in size and has a useful storage of approximately 296 million gallons of water. The quality of the water is very good, having low raw water turbidity. The system's treatment facility allows the system to provide the service population with safe, uninterrupted, high quality water (Cobleskill Village Water Department 2011). To ensure protection of the Cobleskill Reservoirs, Constitution incorporated a route deviation (Alternative Route O) that shifts the pipeline alignment away from the reservoirs and the channels of two contributing streams. Within the Barton Hill Natural Resource Protection Overlay, Constitution has sited the pipeline to co-locate with the existing Tennessee Gas Pipeline, associating new ROW with existing ROW. The Location of the pipeline in relation to the reservoirs is included in Table 3.2-4a.

Constitution will implement the measures detailed in section 5.27 of their ECP to avoid impacts to surface and groundwater resources, including (but not limited to):

- Establishment of staging areas for the crew, equipment, hazardous materials, chemicals, fuels, lubricating oils, etc., no closer than 200 feet from a waterbody, sinkhole, spring, or cave entrance;
- To reduce the risk of groundwater contamination, equipment will not be parked overnight, refueled or serviced within 200 feet of any karst feature;
- Fuel storage and refueling areas will not be located upgradient of sinks, dolines or cave entrances;
- Refueling and fuel storage will not occur within areas of karst pavement;
- Full containment for re-fueling will be provided within areas known to be underlain near the surface by limestone or where karst features are known to be present; and Contractors working on pipeline construction will have oil spill mitigation supplies available (such as spill kits) in the event of spills or leaks of hydrocarbon products.
- Store construction waste materials, debris, and excess materials well away from karst terrain;
- Maintain natural waterbody features, such as riffles and pools;
- Limit the removal of riparian vegetation to the extent necessary;
- Revegetate all disturbed areas after construction to reduce soil erosion;
- Apply fertilizers, herbicides, pesticides, or other chemicals no closer than 200 feet from sinkholes, waterbodies, springs, and cave openings; and
- Remove and dispose of all debris and excess construction materials properly upon Project completion.

If Karst Geology is observed, measures outlined in Constitution's Karst Mitigation Plan will be followed. The Karst Mitigation Plan can be viewed in Attachment 15 of the ECP.

Table 3.2-4a Public Water Supply Watershed Areas Crossed by the Constitution Pipeline

County/Township	Surface Water Supply	Crossing Length (miles)	Approximate Distance/ Direction from Pipeline(miles)
New York			
Sidney/Delaware	Pine Hill Reservoirs	0.82	0.64 miles North of MP 54.28
Schoharie/Cobleskill	Cobleskill Reservoir	0.81	1.2 miles Northwest of MP 111.70
Schoharie/Schoharie	Barton Hill Natural Resource Protection Overlay	2.84	0.84 miles southeast of MP 119.08 (closest spring)

This table contains new information that was not submitted in the November 2013 submittal.

This entire table has been updated since the November 2013 submittal

a: UNT: Unnamed Tributary. UNT name was identified based on review of USGS topographical mapping.

b: P = perennial; I = intermittent; POW = open water; E = Ephemeral

c: 0.0 = waterbody is not crossed but is in workspace. For minor waterbodies less than 3 feet in width delineated in the survey area and shown as a single line feature on the Project alignment sheets, an assumed 3 foot width has been used for this analysis.

d: NY Water Quality Standards Definition: Water quality standards based on the classification and best use of waterbody as determined by NYSDEC (6 NYCRR Parts 815, 879, 931).

e: N/A = Not applicable, no state fishery classification; NY Fishery Classifications: T = Trout; TS = Trout Spawning (6 NYCRR 701.25).

f: Construction windows for cold water fisheries are a based on correspondence from S. Tomasik of NYSDEC to Constitution dated March 21, 2014. Section 3.0 includes Stream and Wetland Protection Procedures. Potential timing restrictions reflect dates during which construction activities may occur. Streams with no construction timing restrictions, shown as "N/A" on the Table, do not have timing restrictions for construction based on NYSDEC regulations and consultations. Waterbody-specific assignment of construction window based on in-field consultation with the NYSDEC (see Attachment J - Waterbody and Wetland Impacts Master Table for further detail).

g: Method III = Conventional Bore; IV = HDD; V = Direct Pipe Method. Intermittent waterbodies containing discernible flow at the time of construction will be crossed using a dry crossing method, unless otherwise authorized by applicable regulatory agencies.

This table has been updated since the November 2013 submittal.

N/A = Not Applicable – for wetland class with N/A it indicates that the wetland is not classified by the NYSDEC

a: No wetlands were identified in the Westfall Road M&R Station site during field surveys in 2012 including pig receiver area. Wetlands associated with MLVs included in the corresponding pipeline segment.

b: Wetland classification according to Cowardin et al. 1979: PEM = Palustrine Emergent Wetland; PSS = Palustrine Scrub-Shrub Wetland; PFO = Palustrine Forested Wetland.

c: 0.0 ft Crossing Length = wetland is not crossed by the pipeline but is within the workspace.

d: Construction Acreage = all workspace during construction activities (temporary & ATWS plus permanent); Operation Acreage = 10-foot wide corridor permanently maintained in herbaceous vegetated cover through PSS wetlands, and 30-foot wide corridor permanently maintained through PFO wetlands where trees taller than 15 feet will be selectively cut and removed (except between the enter/exit points for a HDD crossing where no clearing will occur). The permanently maintained corridors represent a change in cover type from PFO to PSS and PEM or PSS to PEM; there is no operation impact on PEM wetlands, since there is no change in the pre- and post-construction vegetation cover type. Construction impacts were calculated using a proposed construction footprint surface area and existing land use based on field surveys. Surface area of operational maintenance corridor as described above were used to calculate acres of operation impact to each pre-construction wetland vegetation cover type for each wetland included in the table. The ROW width at all wetland crossings is 75 feet, except for those wetlands described in Table 3.3-4.

e: New York classifies wetlands as Class I, II, III, IV (6 NYCRR Chapter X Part 664).

f: Crossing Methods for wetlands are described in Section 3.4; I = Standard Crossing; II = Conventional Crossing; III = Push/Pull Crossing; IV = Conventional Bore; V = Horizontal Directional Drill; VI = Direct Pipe; N/A = Wetland not crossed by pipeline

Surface area of operational maintenance corridor as described above were used to calculate acres of operation impact to each pre-construction wetland vegetation cover type for each wetland included in the table. The ROW width at all wetland crossings is 75 feet, except for those wetlands described in Table 3.3-4.

Note: The impact numbers above include access road impacts as well as pipeline corridor impacts.

Table 3.3-4 Construction Workspace >75 feet Within Wetlands for the Constitution Pipeline^a

State	County	Town	Wetland ID	Milepost	Crossing Length (feet)	Crossing Width (feet)	Wetland Class Impacted	Justification
New York	Chenango	Bainbridge	CH-1A-W047	50.20	129	125	PEM	The increased workspace is necessary for spoil storage to allow for the waterbody and wetland crossings, as well as the storage of spoil and staging of equipment to facilitate the road bore crossing.
New York	Delaware	Harpersfield	DE-1P-W128	90.27	24	97	PEM	The increased workspace is necessary for spoil storage associated with the road crossing, crossing of the existing pipeline ROW, and construction adjacent to the residential development.
New York	Delaware	Harpersfield	DE-1P-W128	90.31	100	125	PEM	The additional workspace will be utilized for spoil storage to allow for construction within the wetland and conduct the crossing of the existing pipeline.
New York	Schoharie	Summit	SC-1E-W100	101.72	83	125	PFO	The workspace is necessary to conduct the wetland and waterbody crossings, as well as the adjacent roadway crossing.
New York	Schoharie	Richmondville	SC-1L-W303	105.77	21	89	PEM	The increased workspace is necessary due to the existing slope, road crossing, waterbody crossing and multiple wetland crossings.

This entire table has been updated since the November 2013 submittal

PAR=Permanent Access Road; PFO=Palustrine Forested; PSS=Palustrine Scrub-Shrub; PEM=Palustrine Emergent; UF=Upland Forest; WB=Waterbody; OL=Open Land; AG=Agricultural land; RD=Roads

a: Acreage impacts were calculated using CAD software using a land use shape file and a workspace shape file created.

b: Construction Acreage = all workspace during construction activities (temporary & ATWS plus permanent); Operation Acreage = 10-foot wide corridor permanently maintained in herbaceous vegetated cover through PSS wetlands, and 30-foot wide corridor permanently maintained through PFO wetlands where trees within 15 feet of the pipeline with roots that could potentially compromise the pipeline coating will be selectively cut and removed (except between the enter/exit points for a HDD crossing where no clearing will occur); The permanently maintained corridors represent a change in cover type from PFO to PSS and PEM or PSS to PEM; 50-foot wide permanent easement corridor permanently maintained in herbaceous vegetated cover in uplands (UF, OL); No operational impacts to palustrine emergent wetlands (PEM), waterbodies (WB), agricultural land (AG) or roads (RD) since there is no change in the pre- and post-construction vegetation cover type unless a permanent structure is proposed. Construction impacts were calculated using a proposed construction footprint surface area and existing land use based on field surveys. Surface area of operational maintenance corridor as described above were used to calculate acres of operation impact to each pre-construction wetland vegetation cover type for each wetland included in the table.

c: Crossing Length of the 100-foot Adjacent Area is measured along the pipeline and does not include the crossing length of a specific land use type.

This is an entirely new Table since the November 2013 submittal

a: Construction Acreage = all workspace used during construction activities (all temporary workspace plus permanent operation)

b: Operational conversion impacts are not be considered as a “loss” of waters of the US under the Nationwide Permit (NWP). Operation Conversion Acreage = 10-foot wide corridor permanently maintained in herbaceous vegetated cover through PSS wetlands, and 30-foot wide corridor permanently maintained through PFO wetlands where trees within 15 feet of the pipeline with roots that could potentially compromise the pipeline coating will be selectively cut and removed (except between the enter/exit points for a HDD crossing where no clearing will occur). The permanently maintained corridors represent a change in cover type from PFO to PSS and PEM or PSS to PEM; there is no operation impact on PEM wetlands, since there is no change in the pre- and post-construction vegetation cover type. Construction impacts were calculated using a proposed construction footprint surface area and existing land use based on field surveys or desktop analysis, including NWI data, in those areas where permission has not been granted to conduct field surveys. Surface area of operational maintenance corridor as described above were used to calculate acres of operation impact to each pre-construction wetland vegetation cover type for each wetland included in the table. The ROW width at all wetland crossings is 75 feet, except for those wetlands described in Table 3.3-4.

c: Wetlands on inaccessible land parcels were assessed using remote sensing computer models. The remote sensing model is known to overestimate wetlands by approximately 30 to 60 percent. Using this technology ensures that all potential impacts will be mitigated without entering the site. Once access to the property is acquired, wetland boundaries will be verified in the field during wetland delineation. Impact mitigation estimates will be updated and are expected to be lower than estimates based on the remote sensing model.

Note: Columns may not sum exactly due to rounding of values in individual cells.

Note: No impacts to wetlands occur within contractor yards.

Note: The impact numbers above include access road impacts as well as pipeline corridor impacts.

None	-	-	-	-	-	-	None	-	-	-	-	-	-	-	-	-	-
Total Remotely Sensed Waterbodies Crossing Length New York										45	0.26						

This is a new table since the November 2013 submittal.

N/A = Not Applicable

TBD = To Be Determined

a: UNT: Unnamed Tributary. UNT name was identified based on review of USGS topographical mapping.

b: MP provided for access roads indicate the point at which the access road meets the proposed pipeline.

c: P = perennial; I = intermittent; POW = open water; E = Ephemeral.

d: Crossings and lengths for waterbody features with "XX" in identification name taken from National Hydrography Dataset GIS datalayer (USGS 2012b) and estimated based on scaled aerial photographs. Where tree canopy cover obscured estimation of the waterbody crossing from scaled aerial photographs, a nominal waterbody crossing width of three feet has been included for single-line NHD waterbody features incorporated into project drawings.

e: MI = Minor (<10 feet); I = Intermediate (>10 - <100 feet); MA = Major (>100 feet).

f: NY Water Quality Standards Definition: Water quality standards based on the classification and best use of waterbody as determined by NYSDEC (6 NYCRR Parts 815, 879, 931).

g: N/A = Not applicable, no state fishery classification; NY Fishery Classifications: T = Trout; TS = Trout Spawning (6 NYCRR 701.25).

h: Construction Windows for cold water fisheries are a based on correspondence from S. Tomasik of NYSDEC to Constitution dated March 21, 2014. Section 3.0 includes Stream and Wetland Protection Procedures. Potential timing restrictions reflect dates during which construction activities may occur. Streams with no construction timing restrictions, shown as "N/A" on the Table, do not have timing restrictions for construction based on NYSDEC regulations and consultations. Waterbody-specific assignment of construction window based on in-field consultation with the NYSDEC (see Attachment J - Waterbody and Wetland Impacts Master Table for further detail).

i: I = Wet Open Cut Method; II = Dry Crossing Method, including Flume or Dam and Pump, Cofferdam, or Dry Open Cut for waterbodies that are dry at the time of crossing; Method III = Conventional Bore; IV = HDD, V = Direct Pipe Method. Intermittent waterbodies containing discernible flow at the time of construction will be crossed using a dry crossing method, unless otherwise authorized by applicable regulatory agencies.

Table 3.3-6b Waterbody Impact Summary of Surveyed and Remote Sensed Areas for Constitution Pipeline in New York

Watershed (HUC 8)	Crossing Length (feet)	Stream Disturbance (acres)		
		Construction ^a (=Temporary+Operation)	Temporary	Operation ^b (=Permanent Fill)
Upper Susquehanna- Surveyed	1,920	3.05	2.99	0.06
Delaware- Surveyed	494	0.89	0.88	0.01
Schoharie- Surveyed	540	0.65	0.64	0.01
Surveyed Sub-Total	2,954	4.59	4.51	0.08
Upper Susquehanna- Remotely Sensed	42	0.24	0.24	0.00
Delaware- Remotely Sensed	3	0.01	0.01	0.00
Schoharie- Remotely Sensed	0	0.01	0.01	0.00
Remotely Sensed Sub-Total ^c	45	0.26	0.26	0.00
New York Total	2,999	4.85	4.77	0.08

This is a new table since the November 2013 submittal.

a: Construction Acreage = all workspace used during construction activities (all temporary workspace plus permanent operation)

b: Operational impacts are considered as a “loss” of waters of the US under the Nationwide Permit (NWP) and would be associated with a permanent fill of waterbody for an access road culverted crossing or similar structure. There is no operation impact to waterbodies that are crossed by the pipeline during construction and subsequently **restored** to their pre-construction condition. Construction impacts were calculated using a proposed construction footprint surface area and existing land use based on field surveys or desktop analysis, including NWI data, in those areas where permission has not been granted to conduct field surveys.

c: Waterbodies on non-accessible land parcels were assessed using the National Hydrography Dataset GIS datalayer (USGS 2012b) and crossing lengths were estimated based on scaled aerial photographs to allow for calculation of stream disturbance acres. Where tree canopy cover obscured estimation of the waterbody crossing from scaled aerial photographs, a nominal waterbody crossing width of three feet has been included for single-line NHD waterbody features incorporated into project drawings. Waterbody delineation and ground truthing of waterbody boundaries will be performed once access to the property is acquired.

Note: Columns may not sum exactly due to rounding of values in individual cells.

Note: No impacts to waterbodies occur within contractor yards.

Note: The impact numbers above include access road impacts as well as pipeline corridor impacts.

Table 3.3-6c Field-Surveyed Jurisdictional Waterbody and Wetlands Impact Summary for the Constitution Pipeline in New York

Jurisdictional Feature	Crossing Length (feet)	Impact (acres)			Total
		Temporary	Permanent		
			Conversion	Fill	
NYSDEC Article 15 Protected Waters ^a	1,894	2.20	N/A	0.02	2.22

All Other USACE Regulated Wetlands (Non-Article 24) ^b	45,641	60.23	14.21	0.07	74.51
Regulated Waters and Wetlands in New York Total	52,235	70.20	15.01	0.11	85.32
NYSDEC Regulated Wetlands 100-foot Adjacent Area	4,677	4.35	4.27	0.21	8.83

This is a new table since the November 2013 submittal.

N/A: Not Applicable

NYSDEC = New York State Department of Environmental Conservation

USACE = US Army Corps of Engineers

a: NYSDEC Article 15 Protected Waters are jurisdictional waterbodies under NY ECL § 15-0501 et seq. (known generally as Article 15), and implementing Rules and Regulations at 6 NYCRR Part 608 under the jurisdiction of the NYSDEC Protection of Waters Program.

b: All Other USACE Regulated Waters and Wetlands (Non-Article 15; Non-Article 24) are jurisdictional waters of the US under Section 401 of the CWA (33 U.S.C. 1341) and Section 404 of the CWA (33 U.S.C. 1344) and implementing regulations 33 CFR 1-499 and 40 CFR 230-232.

c: NYSDEC Article 24 Regulated Wetlands are jurisdictional wetlands under NY ECL § 24-0101 et seq. (known general as Article 24) and implementing Rules and Regulations at 6 NYCRR Parts 663, 664, and 665 under the jurisdiction of the NYSDEC Freshwater Wetlands Program.

Note: This Table has been entirely updated since the November 2013 submittal.

N/A = Not Applicable – for wetland class with N/A it indicates that the wetland is not classified by the NYSDEC

a: Wetland classification according to Cowardin et al. 1979: PEM = Palustrine Emergent Wetland; PSS = Palustrine Scrub-Shrub Wetland; PFO = Palustrine Forested Wetland.

b: 0.0 ft Crossing Length = wetland is not crossed by the pipeline but is within the workspace.

c: New York classifies wetlands as Class I, II, III, IV (6 NYCRR Chapter X Part 664)

d: Crossing Methods for wetlands are described in Section 3.2.5.1; IV = Conventional Bore; V = Horizontal Directional Drill; VI = Direct Pipe; N/A = Wetland not crossed by pipeline, but within the area of right-of way crossed by trenchless crossing. Proposed crossing method to be confirmed following assessment of subsurface geotechnical conditions.

119.67	119.83							

This table has been entirely updated since the November 2013 submittal.

a: The MP locations of sites with a designated status of "N/A" do not correspond with the current MP locations for the proposed supplemental updated Primary Route.

b: Subject to field verification

c: HDD: Horizontal Directional Drilling

DP: Direct Pipe®

TBD: To be determined

Project locations identified as "avoided by route alterations" are no longer crossed by the proposed Primary Route. Avoidance of these locations is a result of incorporation of minor or major route modifications, such that the constraints identified at the specific historic crossing are no longer crossed, or are now crossed at locations which allow for conventional installation methods. Locations awaiting site access are pending landowner agreements for site access or permission to conduct boring operations. Locations not approved for survey are areas where survey access permission could not be obtained. These crossing locations have been modified or abandoned and are no longer associated with the Project.

3.4.5 Direct Pipe Method

3.4.6 Summary of Feasibility Issues with Trenchless Installation Methods

Trenchless methods are still under evaluation for the Project. Final feasibility analyses and details pertaining to trenchless crossing operations and site specific contingency plans will be provided with the updated Trenchless Feasibility Report.

4.0 FISHERIES AND WILDLIFE RESOURCES

Supplemental material within Section 4.0 is limited to new information contained within the associated tables. Please refer to the information provided within the November 2013 supplemental submission for unaltered Project details contained within the narrative.

4.1 FISHERIES OF SPECIAL CONCERN

4.2 NEW YORK STATE PROGRAMS

4.2.1 Trout Waters

4.2.2 Construction and Operation Impacts and Mitigation

4.2.3 Minimization of Impacts

4.3 THREATENED AND ENDANGERED SPECIES

Table 4.3-1 Federal- and State-listed Protected Species Potentially Occurring Within the Project Area and Survey Results

Species Common Name	Scientific Name	Federal Status ^a	State Status ^a	Habitat Type	Surveys Conducted (Yes/No)	Documented within Project ROW (Yes/No)	Potential Effect Determination ^c
Bald Eagle ^b	<i>Haliaeetus leucocephalus</i>	D	T	Associated with riparian and lacustrine habitats (forested areas along rivers and lakes), especially during the breeding season. Important year-round habitat includes wetlands, major waterbodies, spring spawning streams, ungulate winter ranges, and open water areas. Wintering habitat may include upland sites. Nesting site selection is dependent upon maximum local food availability and minimum disturbance from human activity.	Yes	No	No effect
Indiana Bat	<i>Myotis sodalis</i>	E	E	Fall/winter hibernacula located within limestone caverns and abandoned mines; summer roosting in loose bark of trees. While Indiana bats were known to winter in Albany County, the USFWS now believes they are likely extirpated or in such small numbers that it is unlikely they would be present and impacted by any specific proposed projects in Schoharie County. Further, correspondence with NYSDEC detailed that species-specific surveys for Indiana bat would not be required (Herzog 2012).	Yes	No	No effect

Table 4.3-1 Federal- and State-listed Protected Species Potentially Occurring Within the Project Area and Survey Results

Species Common Name	Scientific Name	Federal Status ^a	State Status ^a	Habitat Type	Surveys Conducted (Yes/No)	Documented within Project ROW (Yes/No)	Potential Effect Determination ^c
Northern Monkshood	<i>Aconitum noveboracense</i>	T	T	Found along streams on sandstone in cool ravines shaded by hemlock and hardwoods and on cliffside seeps. Flowers July-August and fruits from August-October Found in Delaware County, NY	Yes	None identified to date	No adverse effect on accessible parcels. Additional surveys pending landowner survey access permission.
Hooker's orchid	<i>Platanthera hookeri</i>	-	E	Dry to moist coniferous and deciduous forests with an open understory, and successional forests-flowers mid-May-early August	Yes	None identified	No effect
Northern wild comfrey	<i>Cynoglossum virginianum</i>	-	E	Along borders of deciduous woods and thickets or along paths or trails in sandy or rocky, dry circumneutral or calcareous soils-flowers mid-May-July, fruits-mid June-mid October.	Yes	None identified	No effect
Dwarf Wedgemussel	<i>Alasmidonta heterodon</i>	E	E	Inhabits creek and river areas with slow to moderate current and a sandy, gravel, or muddy bottom. Known populations occur in the upper Delaware River in Sullivan and Delaware counties and one major downstream tributary, the lower Neversink River in Orange County.	Yes	No	No adverse effect on accessible parcels.

Table 4.3-1 Federal- and State-listed Protected Species Potentially Occurring Within the Project Area and Survey Results

Species Common Name	Scientific Name	Federal Status ^a	State Status ^a	Habitat Type	Surveys Conducted (Yes/No)	Documented within Project ROW (Yes/No)	Potential Effect Determination ^c
Yellow lampmussel	<i>Lampsilis cariosa</i>	-	Unlisted	Inhabits small to large rivers with sandy substrates. This species identified as occurring in Schoharie Creek.	No – Survey could not be completed due water conditions.	No Surveys completed	No effect -Direct impact avoided through implementation of trenchless construction method.

This table has been updated since the November 2013 submittal.

Source: Species list is based on informal consultations with the USFWS, review of the USFWS New York Field Office website, and consultations with NYNHP (Conrad 2012 and 2013, Herzog 2012; Niver 2012; Pietrusiak 2012; Stilwell 2012; USFWS 2012b; VanArsdale 2013).

a: Status Key: D = Delisted; E = Endangered; T = Threatened

b: The bald eagle is no longer a federal-listed endangered or threatened species, but is protected under the BGEPA and the MBTA. See Section 3.4.1.1.1 for further information.

c: Concurrence on effect determinations is pending final consultation with the USFWS New York Field Office and NYSDEC. A preliminary “No effect” determination by Constitution is due to the completion of survey with no documented occurrence of the species or its habitat in the Project Area. TBD-Effect determination to be determined once habitat assessment or presence/absence surveys has been completed.

5.0 NEW YORK STATE LANDS

Supplemental material within Section 5.0 is limited to new information contained within the associated tables. Please refer to the information provided within the November 2013 supplemental submission for unaltered Project details contained within the narrative.

5.1 MELONDY HILL STATE FOREST

5.2 CLAPPER HOLLOW STATE FOREST

Table 5.0-1 New York State Lands Crossed by the Constitution Project

County	Milepost	Name of Area	Land Ownership Management	Crossing Length (feet)	Existing Land Uses Crossed ^a	Area Affected (Acres)	
						Construction ^b	Operation ^c
Chenango	42.54-42.59	Melondy Hill State Forest	NYSDEC	307	UF, RD	0.86	0.39
Schoharie	97.02-97.09	Clapper Hollow State Forest	NYSDEC	333	UF, PEM, PFO, RE, WB, OL	1.36	0.47

This table has been entirely updated since the November 2013 submittal.

Source: USGS 2012.

a: UF = Upland Forest, RD = Road, OL = Open Land, PEM = Palustrine Emergent Wetland, PFO = Palustrine Forested Wetland, RE = Residential, WB = Waterbody

b: Construction Acreage = workspace utilized during construction activities (temporary plus permanent);

c: Operation Acreage = 50-foot width permanently maintained easement through upland areas; 10-foot wide corridor permanently maintained in herbaceous vegetated cover through PSS wetlands, and 30-foot wide corridor permanently maintained through PFO wetlands where trees within 15 feet of the pipeline with roots that could potentially compromise the pipeline coating will be selectively cut and removed. The permanently maintained corridors represent a change in cover type from PFO to PSS and PEM or PSS to PEM; there is no operation impact on PEM wetlands, since there is no change in the pre- and post-construction vegetation cover type.

6.0 COMPLIANCE WITH REGULATORY STANDARDS

Supplemental material within Section 6.0 is limited to new information contained within the associated tables. Please refer to the information provided within the November 2013 supplemental submission for unaltered Project details contained within the narrative.

6.1 FEDERAL

6.1.1 Section 404 Clean Water Act

6.1.1.1 Compliance with NWP 12 and NWP General and Regional Conditions

6.1.2 Section 401 Water Quality Certification

6.2 NEW YORK STATE

6.2.1 Protection of Waters

6.2.1.1 Standards for Permit Issuance

6.2.2 Freshwater Wetlands

6.2.2.1 Compatibility Test

6.2.2.2 Weighing Standards

6.2.2.3 Mitigation

6.3 CONCLUSION
